

Deluge Check Valve

Used to disperse large quantities of fluid in a short period of time. Any Strataflo check valve can be converted into a deluge check valve. To order, just add a "-M" to the end of the standard part number. Deluge valves are made at the time of order. Call for price and availability.

SKU: Deluge

Type: Check Valve / Special Use: Deluge Check Valve

Deluge Check Valve

Any Strataflo check valve can be converted into a deluge check valve. Deluge check valves are used in application where a large quantity of fluid needs to be delivered in a short period of time. When the deluge system is pressurized, the poppet will immediately open and allow the fluid to spray around it. To order, first determine the base check valve that is compatible with the application, then select the pipe size. Any Strataflo check valve can be used, however common models used are [No. 300](#) and [No. 400](#) check valves in sizes from 1/2" - 1". To order, just add a "-M" to the end of the standard part number. Deluge valves are made at the time of order. Call for price and availability.
